

A POLICY GUIDE

for Implementing
Essential Interventions
for Reproductive,
Maternal, Newborn
and Child Health
(RMNCH)

A MULTISECTORAL POLICY COMPENDIUM FOR RMNCH

A Policy Guide for Implementing Essential Interventions for Reproductive, Maternal, Newborn and Child Health (RMNCH): A Multisectoral Policy Compendium for RMNCH emerged from a series of multi-stakeholder consultations by networks of partners working on policies which affect reproductive, maternal, newborn, child and adolescent health. The document is designed for an audience of policy-makers, programme managers and advocates who seek to classify and assess information on specific policies to promote the implementation of essential reproductive, maternal, newborn and child health interventions to address the main causes of maternal, newborn and child ill-health and deaths.

For a full list of partner organizations and contributors please see the back and inside covers.

APPROACH AND METHODS

BACKGROUND: POLICIES FOR REPRODUCTIVE, MATERNAL, NEWBORN AND CHILD HEALTH (RMNCH)

Policies are essential for ensuring that all women and children have the opportunity to achieve the highest standard of health, by supporting the development of and sustaining effective health systems and by creating environments that promote health more broadly.

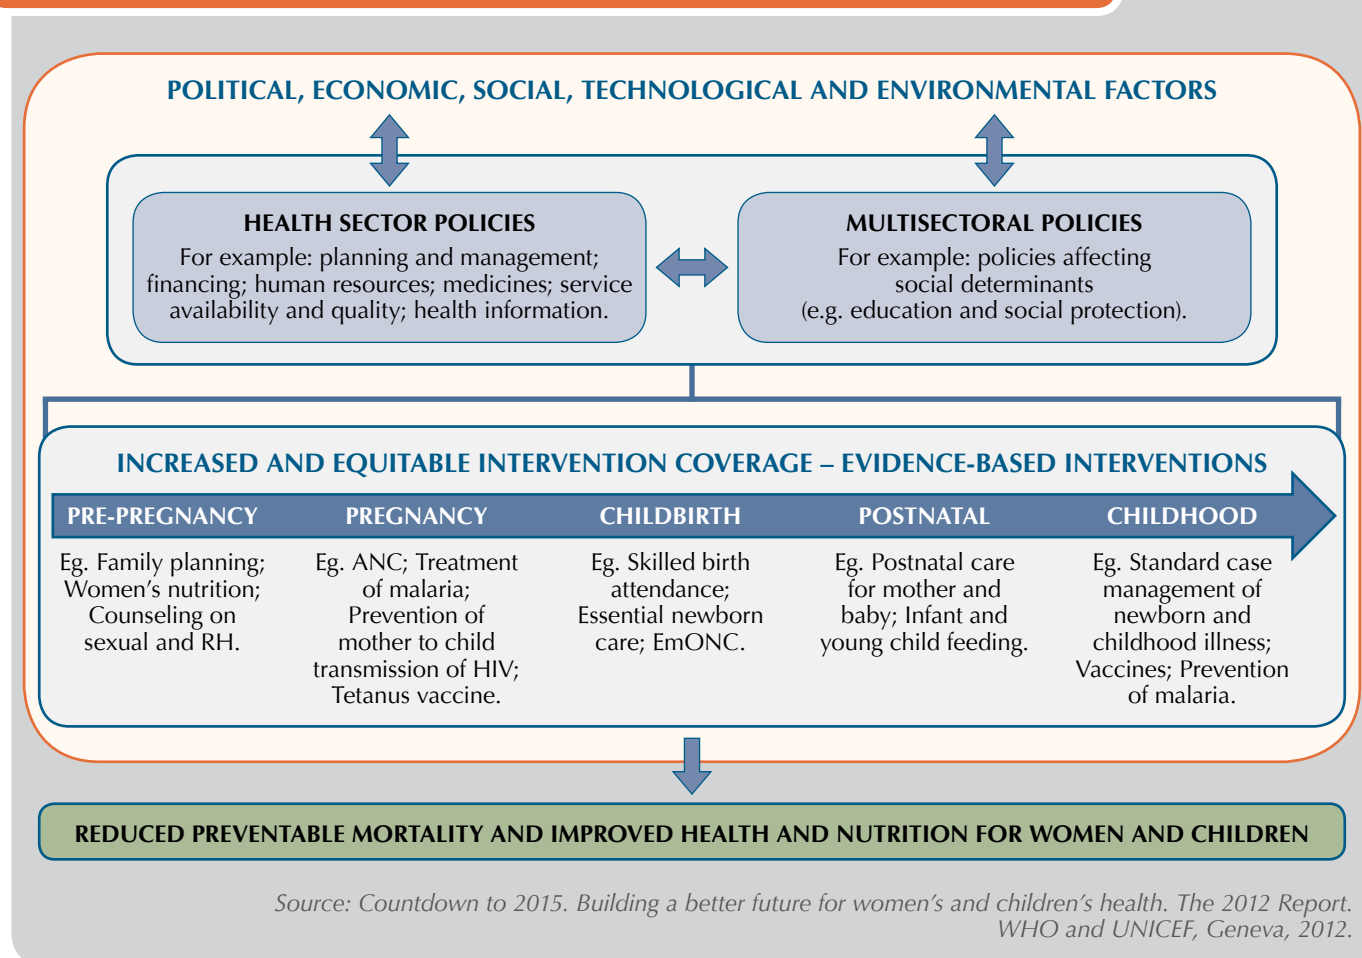

The majority of mortality and morbidity in women and children can be prevented with effective and affordable interventions that prevent or treat the most common causes of illness.¹ There is widespread consensus that improving the coverage and quality of these interventions should be the focus of policies and associated programmes (Box 1). Social determinants, including education, income, clean energy, availability of housing and access to improved water sources and sanitation facilities, also influence women's and children's health and their ability to receive essential interventions. However, in many settings, interventions are still not reaching women and children, and key social determinants of health remain unaddressed. In 2010, an estimated 287 000 women died during pregnancy and childbirth² and in 2012, 6.6 million children under the age of five died.³ Many countries are not yet on track to achieve MDGs 4, 5 and 6, - to reduce child mortality, improve maternal health and combat HIV/AIDS, malaria and other diseases, respectively.⁴

Box 1: ESSENTIAL EVIDENCE-BASED INTERVENTIONS FOR RMNCH¹

- Demonstrated to be effective in improving maternal, newborn and child health and survival by addressing the main causes of mortality;
- Delivered along the continuum of care for women and children – from the reproductive years, through pregnancy, birth, the newborn period, infancy and childhood;
- Suitable for implementation in low- and middle-income countries;
- Delivered at all levels of the health system: community/home, first level and outreach, and referral-level services;
- Selected based on systematic data reviews and meta-analyses; WHO recommendations and guidelines; and input from experts in the field.

The need for accelerated action is emphasized in the United Nations Secretary-General's Global Strategy for Women's and Children's Health⁵ and by the Every Women Every Child initiative,⁶ which build on the Campaign on Accelerated Reduction of Maternal Mortality in Africa (CARMMA) and other initiatives, and aim to mobilize resources and intensify global efforts for RMNCH. It is essential to strengthen RMNCH programmes to ensure that the most vulnerable women and children have improved access to high-quality services. Health-specific policies and multisectoral policies are central to this effort because they establish: an environment conducive to health promotion; the legal and technical basis for which RMNCH interventions are delivered; how they are delivered; and who is eligible to receive them (Figure 1).

FIGURE 1: SUMMARY IMPACT MODEL: SUPPORTIVE POLICIES FOR RMNCH

WHAT IS THE PURPOSE OF THIS COMPENDIUM?

This compendium is a companion document to the Essential Interventions, Commodities and Guidelines for Reproductive, Maternal, Newborn and Child Health.¹ It presents key health-systems-related policies that support the delivery of proven interventions to women and children. It also includes policies on the economic, social, technological and environmental factors that influence health outcomes and service delivery. By synthesizing policy areas, the compendium aims to provide the basis for an integrated approach to advocacy, policy dialogue and planning for RMNCH – both within the health sector and across sectors that influence RMNCH. Policy recommendations change over time, as new evidence on effective interventions and delivery channels are added. For this reason, the compendium is a living document and will be regularly updated. The more detailed process of policy review, development and implementation is beyond the scope of this document. Links are provided to tools and resources for this purpose.

WHO IS IT FOR?

The compendium is designed for policy-makers and managers who are responsible for developing, implementing and evaluating RMNCH strategies, plans and programmes, as well as those from sectors that influence health-service delivery and RMNCH outcomes. In addition, a number of actors outside the government may play an important role in delivering RMNCH services, including civil society organizations, professional associations and the private sector.

Within Ministries of Health, RMNCH programmes may be housed in a single department (such as reproductive and family health) or across several departments such as reproductive and maternal health, newborn and child health, immunization, nutrition, malaria, and HIV/AIDS. RMNCH programmes work in close collaboration with health systems departments such as human resources, essential medicines and commodities, health promotion/communication, monitoring and evaluation. Policy-makers and programme managers in all of these areas may have responsibility for aspects of RMNCH policy – and need to be involved with reviewing and developing policy content.

Sectors that influence RMNCH include financing, agriculture, education, transportation, energy, social and community development and national human rights institutions. Advocates, policy-makers and managers working in these sectors may also use the compendium to inform policy dialogue and planning.

HOW WERE POLICIES SELECTED?

Policies are defined as decisions, plans or actions that are necessary to improve RMNCH health outcomes and reduce mortality.⁷ Using this definition, policies may be written plans, strategies, laws, regulations, codes of practice or guidelines that are needed to deliver all or parts of the minimum package of interventions; or to improve social determinants of RMNCH. Policies are usually established by national policy-makers and managers for widespread use in a country. Often in decentralized systems, national policies can be further endorsed/adopted at subnational levels. Also, in these decentralized systems, subnational policymakers can develop specific policies in response to local needs.

The compendium brings together evidence and consensus-based policy recommendations and guidance that can be used to support four types of policies that are required to support the implementation of essential RMNCH interventions. These types of policies include:

- Health systems policies that are approved by ministries of health, such as strategies, plans and guidelines for human resource training and deployment, and procurement and distribution of medicines and supplies;
- RMNCH policies that are specific to the technical components of RMNCH along the continuum of care, such as clinical guidelines, roles and responsibilities for health workers and in-service training plans;
- International agreements/conventions that governments approve and that apply across sectors and countries, including laws, regulations and codes;
- Multisectoral policies that influence RMNCH service delivery and outcomes, such as water and sanitation, food security, education and infrastructure.

Health-sector-related policy recommendations and guidance were identified from policy, strategy, and programme documents from the United Nations, Countdown to 2015, WHO and associated initiatives including the International Health Partnership (IHP+), Commission on Information and Accountability for Women's and Children's Health, in the areas of reproductive, maternal, newborn, child and adolescent health and health systems. These policies were reviewed using three principal criteria: technical relevance to RMNCH, availability of evidence and consensus on its importance. In order to be included in the compendium, the policy needed to meet these three criteria as defined in Box 2.

Box 2: CRITERIA FOR SELECTING KEY HEALTH-SECTOR-RELATED POLICIES

| CRITERIA | DEFINITION |
|-------------------------------------|---|
| Technical relevance to RMNCH | Required to deliver essential evidence-based RMNCH interventions along the continuum of care (as defined in the Global Review of the key interventions related to RMNCH). ¹ |
| Evidence available | Available evidence supports the importance of the policy area for global RMNCH programme implementation (WHO technical and clinical guidelines tools or reports and/or reviews from peer-reviewed journals). |
| Consensus | Included in UN/International/treaties, codes, conventions, declarations; World Health Assembly resolutions; and/or in global monitoring and evaluation frameworks such as WHO, UN and related partners' statistics and databases. |

The multisectoral policy recommendations included in the compendium were identified from key United Nations reports related to sustainable development and the MDGs, including the UN System Task Team's proposed framework of the core dimensions of sustainable development in the post-2015 development agenda.⁸ The policies are those that the health sector engages with across government and with other development sectors of major impact for women's and children's health, to improve RMNCH and influence its determinants.

HOW IS IT ORGANIZED?

In this compendium, policies are organized into two broad categories:

- Health sector policies for supporting delivery of RMNCH interventions along the continuum of care divided into nine topic areas based on an adapted version of the health systems building blocks framework⁹ and;
- Multisectoral policies that influence service delivery and RMNCH outcomes divided into seven topic areas based on the proposed framework of the core dimensions of sustainable development in the post-2015 development agenda.

The Policy Compendium contains key policy content and supporting documents and guidelines for relevant policies within each topic area (See Box 3).

Box 3: ORGANIZATION OF POLICY COMPENDIUM EXPANDED TABLES

| HEALTH SECTOR POLICIES FOR SUPPORTING DELIVERY OF RMNCH INTERVENTIONS | | |

Obligations and duties 7. Good governance | Key content for policies within each topic area | Documents for each topic area which support a wide consensus on its adoption and use |

HOW CAN IT INFORM POLICY DIALOGUE, PLANNING AND IMPLEMENTATION?

The Policy Compendium is intended to support policy dialogue and integrated planning of RMNCH programmes (see Annex 2). Reviewing and developing many of the core policies requires expertise from different RMNCH technical areas, health systems and sectors outside of health and therefore requires better integration and coordination among stakeholders. Integrated planning for RMNCH has a number of benefits, including:

- Ensuring that RMNCH policies are incorporated into national health strategies and plans.
- Encouraging integration of RMNCH interventions and health programmes. Since RMNCH interventions are often closely related and delivered by the same staff and systems, they can be delivered more efficiently and effectively by integrated programmes.
- Encouraging integration of essential RMNCH interventions into other health programmes (such as HIV/AIDS, TB, malaria, noncommunicable diseases and nutrition). Linking with other programmes can improve quality and coverage of women's and children's health interventions and improve programme efficiency.

Having core policies in place is an essential step to improve the coverage and quality of RMNCH interventions. For this reason the core policy content contained in the compendium should inform strategic planning, priority setting and implementation planning for RMNCH. Key policy measures should be included in reviews of RMNCH programme performance. When gaps are identified, the core policy content can inform advocacy, consensus building between stakeholders and best approaches to develop needed policies. Further examples of how the compendium may be used for planning, priority setting and advocacy are summarized in Annex 2.

A more in-depth process is required to review the status and effectiveness of existing policies and to further develop and implement policies. Tools and methods for this purpose are presented in Annex 3, along with example benchmarks for tracking the process of policy implementation more broadly.

HOW CAN IT BE USED?

This compendium could be used in different ways. If the user is interested in all areas of the RMNCH continuum of care, this compendium could be used as a checklist, in which case the user is recommended to look at both health and the multi-sector policy categories.

Within each of the two broad policy categories, the reader can choose to examine a single policy topic area at a time (see the Overview for a list of policy topic areas and policies). For example, within the Health Sector policy category the user may choose to focus on the health workforce policy topic area for RMNCH.

If the user is interested in addressing one area of the continuum of care, for example childbirth, the recommendation is to first look at all policy topic areas and then the policies specific to childbirth e.g. emergency obstetric care.

HEALTH SECTOR POLICIES TO SUPPORT RMNCH PROGRAMMING AND THE DELIVERY OF RMNCH ESSENTIAL INTERVENTIONS

The Health Sector Policies focuses on RMNCH programming within the health sector and key health sector policies for delivering RMNCH essential interventions. It is divided into nine topic areas, based on the RMNCH legal and policy environment and the health systems building blocks framework.^{9,10}

1. IS HEALTH PROTECTED IN THE NATIONAL CONSTITUTION AND ARE THERE LEGAL ENTITLEMENTS THAT FACILITATE UNIVERSAL ACCESS TO HEALTH CARE IN SUPPORT OF RMNCH PROGRAMMING?

MULTISECTORAL POLICIES

MULTISECTORAL POLICIES THAT INFLUENCE RMNCH SERVICE DELIVERY AND OUTCOMES

The Multisectoral Policies focuses on multisectoral policies that the health sector engages with across government and other development sectors of major impact for women's and children's health, to improve RMNCH and influence its determinants. It is divided into seven topic areas, informed by several key United Nations reports related to sustainable development and the Millennium Development Goals (MDGs). It is structured around the UN System Task Team's proposed framework of four core dimensions of sustainable development in the post-2015 development agenda: inclusive economic development; environmental sustainability; inclusive social development; and peace and security.⁸

1. ARE THERE POLICIES RELATED TO INCLUSIVE ECONOMIC DEVELOPMENT, SUCH AS REDUCING INEQUALITIES?

| POLICY ON: | CONTENT | SUPPORTING DOCUMENTS / GUIDELINES |
|---|---|---|
| Eradicating income poverty and hunger | Sets out regulations and strategies to: <ul style="list-style-type: none"> Promotes women's abilities and opportunities to earn a decent income, including equal pay for equal work, and their capacity to retain control over that income. Reduce the inequitable distribution of resources (including food and health care) within households by gender. Ensure access to land, natural resources, energy inputs and services for smallholder farmers to support sustainable food production and consumption. Introduce food-related social safety nets such as early warning systems, targeted cash- or food-for-work programmes and emergency response systems. | <ul style="list-style-type: none"> ILO Declaration on Social Justice for a Fair Globalization. 2008. http://www.ilo.org/global/meetings-and-events/campaigns/voices-on-social-justice/WCMS_099766/lang--en/index.htm UN Women. OPPORTUNITIES FOR USING THE RMNCH POLICY COMPENDIUM AS A TECHNICAL REFERENCE

The Policy Compendium provides core content for RMNCH policies. It can be used to identify critical gaps in the RMNCH policy agenda and inform the response to these problems. Table 3 lists different entry points in the policy dialogue, planning and implementation processes and indicates ways the compendium could be used to inform decisions and next steps via these entry points.

TABLE 3: USE OF THE RMNCH POLICY COMPENDIUM TO INFORM POLICY DIALOGUE, PLANNING AND IMPLEMENTATION

| ENTRY POINTS TO POLICY DIALOGUE, PLANNING AND IMPLEMENTATION | USE OF THE POLICY COMPENDIUM |
|---|---|
| Broad health sectoral reviews e.g. Joint Assessment of National Health Strategies and Plans (JANS) | <ul style="list-style-type: none"> - Identifying key RMNCH policies that need to be in place. - Identifying gaps in national health policy/strategy that impact RMNCH. - Informing priority setting and resource allocation for systems that support RMNCH services. |
| RMNCH situation analyses and programme reviews e.g. Country Countdowns and Country Profiles, RMNCH Programme Reviews | <ul style="list-style-type: none"> - Identifying key policies to be considered in RMNCH situational analysis. - Identifying policy gaps in health systems or RMNCH technical policies. - Informing systems requirements for RMNCH and identifying systems gaps. |
| Stakeholder policy dialogue focusing on RMNCH | <ul style="list-style-type: none"> - Informing both policies needed and policy content required – in order to identify areas where action is needed, and the types of actions that should be taken. - Providing technical basis for allocation of responsibilities. |
| Stakeholder policy dialogue to negotiate integration of RMNCH policies into other technical programmes or sectors | <ul style="list-style-type: none"> - Informing both policies needed and policy content required – in order to identify areas where action is needed, and the types of actions that should be taken. - Providing technical basis for allocation of responsibilities. |
| Priority setting | <ul style="list-style-type: none"> - Providing content to inform allocation of priorities between systems and technical areas. |
| Planning | <ul style="list-style-type: none"> - Supporting implementation planning by identifying core policies needed to strengthen health systems to improve coverage and quality of RMNCH interventions. |
| Resource allocation | <ul style="list-style-type: none"> - Providing a basis for resource allocation based on policy commitments. - Informing cost analyses of programme impact based on policy inputs. |
| Monitoring policy implementation progress | <ul style="list-style-type: none"> - Providing content for monitoring of policy implementation (who, where, when, how) at national, regional and global levels. |
| Evaluation | <ul style="list-style-type: none"> - Providing content for evaluating progress; and for understanding changes in RMNCH impact and outcome measures. |
| Advocacy for RMNCH | <ul style="list-style-type: none"> - Providing technical basis for key RMNCH policy messages and priorities – within and outside the health sector. |
| Accountability within the health sector, across sectors and stakeholders | <ul style="list-style-type: none"> - Informing both policies needed and policy content required – in order to identify areas where action is needed, the types of actions that should be taken, and who should be responsible. |

TOOLS AND METHODS FOR REVIEWING, DEVELOPING AND IMPLEMENTING POLICIES FOR RMNCH

The Policy Compendium provides a technical reference for RMNCH policies and their content. It can therefore serve as the content guide for policy reviews, planning and development. A number of tools to support these processes are available or under development. A summary of some of these tools and methods is presented alphabetically in this section.

BENCHMARKS FOR WHOLE OF GOVERNMENT POLICY PRACTICE (PMNCH) (SEE TABLE A ON PAGE 54)

DESCRIPTION: The 'benchmarks for whole of government policy practice' serves as a guide to enable best practice policy-making across government.

PROCESS: It can be used by government departments and other stakeholders to benchmark current policy-making against key evidence-based standards and identify where change is required to strengthen the policy-making process. It can also be used as part of a broader policy dialogue process to support the development of an inclusive, flexible and innovative approach to policy design and review, implementation, accountability and evaluation and learning. The benchmarks can be used as a checklist to identify strengths, weaknesses and areas where action is needed. It is designed to be part of a multi-stakeholder process – and to inform implementation planning. Whole of government benchmarks are summarized in Table 4.

OUTPUTS: Policies in key areas revised, developed or strengthened and used to inform implementation.

COUNTRY CASE-STUDY PROTOCOL: REVIEWING IMPLEMENTATION OF RMNCAH PROGRAMMES (RMNCH ALLIANCE, WHO, PMNCH)

DESCRIPTION: This protocol describes an approach to developing case-studies on the current status of RMNCAH programme implementation. It is designed to assist countries to determine programme successes and ongoing implementation challenges for scaling-up evidence-based RMNCAH interventions.

PROCESS: Existing assessments, surveys, plans and reviews are used to summarize the current status of implementation of essential RMNCAH interventions with an emphasis on policy and systems barriers that have been addressed or that need to be addressed. The process is conducted by a local programme coordinator in collaboration with a local or outside consultant. A one-day meeting with a stakeholder group is convened. Case-studies are developed for two successful policy, systems or intervention areas that have shown improvements; and two that have not responded to national strategies or programmes. Case-study findings are used to identify key actions and resource inputs required to address remaining barriers and gaps to inform implementation plans and resource allocation.

OUTPUTS: Country case-study documents (two successes and two areas where more work is needed) that describe key strategies or actions needed to improve delivery of RMNCAH interventions.

Further information is available at: http://www.who.int/pmnch/media/news/2013/partnership_asiapacific/en/

COUNTRY COUNTDOWN TOOLKIT AND COUNTRY PROFILES (COUNTDOWN TO 2015)

DESCRIPTION: This toolkit includes a guide for conducting a Country Countdown, PowerPoints for each of the 75 Countdown countries based on the Countdown country profile, and other related materials. It describes an approach for assessing which RMNCH interventions are being delivered effectively and which are not, identifying the geographic areas and population groups where coverage levels are lagging, analysing the impact of policies and health systems factors on coverage levels and trends, and assessing financial flows to RMNCH. Findings are used to identify areas for priority action, refine national strategies and plans, improve service quality and coverage across all subgroups, increase awareness of – and political commitment to – women's and children's health, and to promote accountability for progress.

PROCESS: The Countdown process engages all key stakeholders and involves compiling, analysing, and discussing the

policy and programmatic implications of available evidence on RMNCH and nutrition. Countdown country profiles present in one place the best and latest available evidence to enable an assessment of a country's progress in improving RMNCH and nutrition. The range of indicators on the profile includes demographic measures, and measures of coverage, equity, health systems and policies, and financial flows. Countdown profiles provide information across the continuum of care on where success has been achieved and where gaps remain, which can inform national reviews and other prioritization processes. Summary findings and key messages in Countdown reports and analyses can help decision-makers identify where resources should be directed to strengthen policies, programmes and scale-up efforts. The Country Countdown process is designed to be repeated regularly in countries.

OUTPUTS: Countdown findings are used to promote evidence-based decisions, leading to stronger and more equitable RMNCH policies and programmes. Country profiles are used at global and national levels for tracking progress and holding stakeholders accountable for progress over time.

Further information is available at: <http://www.countdown2015mnch.org/country-countdown>

GUIDE FOR MULTI-STAKEHOLDER POLICY DIALOGUE PROCESS (PMNCH AND OTHER PARTNERS)

DESCRIPTION: This guide presents tools and methods to assist conveners and facilitators in managing multi-stakeholder dialogue processes on policy issues related to the implementation of essential interventions to promote women's and children's health.

PROCESS: The guide will focus on multi-stakeholder dialogue for developing an Aligned Stakeholder Action Programme (ASAP)—a shared workplan at the national or subnational level that aligns stakeholder policy actions for implementation of essential RMNCH interventions. The process includes an analysis of priorities, development of a strategy to address problem areas, and development of an implementation plan. The guide is aimed at actors and organizations who will be designing and facilitating the multi-stakeholder dialogue process for developing an ASAP. It provides a step-by-step process for how to lay the groundwork for convening the dialogue process, design and facilitate it, and monitor it in the post-dialogue phase.

OUTPUTS: Improved capacity to develop a shared ASAP to support implementation of national health plans and accelerate progress towards improving women's and children's health.

IMPLEMENTATION READINESS TOOL FOR ACHIEVING HIGH COVERAGE OF RMNCH INTERVENTIONS (USAID/MCHIP)

DESCRIPTION: This tool provides a framework for assessing the status of implementation of essential RMNCH interventions (from the pre-introduction phase to the mature implementation phase when the intervention has become institutionalized). It identifies the key implementation tasks that must be completed to achieve sustainable improvements in coverage of essential interventions.

PROCESS: Scale-up maps and a change effort checklist are used to determine progress and gaps in the process of scaling up implementation. Local data and reports from programme staff are used to determine implementation status of selected interventions or intervention packages. Scaling up an intervention is recognized as a political as well as a technical process that must be done in the context of existing systems and policies. Policies are an essential component of scaling up interventions and are reviewed along with health systems. The tool is used by all stakeholders including ministries of health, donor agencies and implementing partners.

OUTPUTS: Implementation scale-up maps for selected interventions that identify systems and policy areas where progress is satisfactory and areas where there are gaps. Findings are used to support improved planning and implementation.

INFORMATION, COMMUNICATIONS AND TECHNOLOGY (ICT) READINESS WORKBOOK AND 'TO DO' LIST (PMNCH AND OTHER PARTNERS)

DESCRIPTION: The ICT Readiness Workbook and 'To Do' list is an aid for stakeholders who are considering scaling up the use of technology for delivering RMNCH interventions. This workbook is not intended to replace existing guidelines, but instead seeks to identify existing standards, guidance or best practice(s) and promote their use. It is based on a synthesis of research and the expert opinion of an advisory panel made up of both PMNCH Partners and other industry specialists.

PROCESS: The workbook and 'do-list' has been designed to be used as part of a stakeholder dialogue. A list of key standards and best practices is reviewed; stakeholders make decisions about what has already been done,

and the remaining gaps, for each stage of scale-up (pre-pilot, pre-scale-up and pre-operations). There are two options for use: a 'short' option for those constrained by time (e.g. two to four hours), where the critical questions are tabled for each phase of scale-up, and a longer version appropriate for a multi-day workshop.

OUTPUTS: A review of ICT needs for scaling up technology to support RMNCH, with areas that need work identified and consensus between stakeholders.

JOINT ASSESSMENT OF NATIONAL HEALTH STRATEGIES AND PLANS (JANS): COMBINED JOINT ASSESSMENT TOOL AND GUIDELINES (IHP+)

DESCRIPTION: The joint assessment is a shared approach to assessing the strengths and weaknesses of a national strategy, which is accepted by multiple stakeholders, and can be used as the basis for technical and financial support. The presumed benefits of joint assessment include enhanced quality of national strategies and greater partner confidence in those strategies, thereby securing more predictable and better-aligned funding. The inclusion of multiple partners in a joint assessment is also expected to reduce transaction costs associated with separate assessment processes.

PROCESS: The JANS can be used to assess an overall national health strategy or specific subsectoral and multisectoral strategies such as RMNCH. The method examines the strengths and weaknesses of five sets of attributes considered the foundation of any 'good' and comprehensive strategy including: situation analysis; process used for development; costs and budgetary framework, implementation and management arrangements, and monitoring, evaluation and review mechanisms. RMNCH policies are reviewed as part of the situation analysis. The way a joint assessment is carried out will be unique to each country, but based on some key principles: it should be country demand driven; be country led and build on existing processes; include an independent element, and engage civil society and other relevant stakeholders.

OUTPUT: An assessment of the strengths and weaknesses of the RMNCH strategy, with recommendations. Findings can be discussed by national stakeholders and partners and may be used to revise the strategy.

Further information is available at: <http://www.internationalhealthpartnership.net/en/tools/jans-tool-and-guidelines/>

PROGRAMME REVIEW FOR REPRODUCTIVE, MATERNAL, NEWBORN AND CHILD HEALTH TOOL (WHO)

DESCRIPTION: This is an approach for systematically reviewing all aspects of RMNCH programming and determining how well activities have been implemented. Main problems are identified, and recommendations for the next workplan are developed. The method is designed to build on the existing process of routine programme planning and can be applied at any level.

PROCESS: RMNCH programme activities conducted in key policy and systems areas are reviewed along the continuum of care for the mother and child. The review is undertaken by a team including health staff from all levels, different departments of the ministry of health and partners. Data from a number of sources are synthesized, including input from staff working in the field. Since staff from different technical areas are involved, as well as stakeholders, it emphasizes integrated planning and coordination of activities.

OUTPUTS: Recommendations for action to improve programme implementation and coverage of RMNCH interventions that can be implemented in national or subnational workplans.

RAPID PROGRAMME REVIEW FOR ADOLESCENT HEALTH (WHO)

DESCRIPTION: The tool provides guidelines for a rapid review of selected national public health programmes to examine how well they are addressing adolescents; and to provide guidance on what can be done to build on strengths and tackle weaknesses.

PROCESS: The tool can be used by government departments and other stakeholders. It is a sequential process that reviews and synthesizes data and programme information using a structured approach – and can be used for all or selected programme areas (such as RMNCH). Strengths, weaknesses and opportunities are identified and actions for improvements are recommended. The process can also be used to advocate for adolescent health and to secure stakeholder consensus around actions needed.

OUTPUTS: Identifies clear directions on actions by the health sector and other sectors to improve adolescent health and development outcomes.

ACKNOWLEDGEMENTS

The Policy Compendium is the result of collaborative work among key partner organizations and constituencies working on policies which affect the health of women, newborns, children and adolescents. The process was led by the World Health Organization and the Partnership for Maternal, Newborn & Child Health (PMNCH). An Advisory Group, reflecting networks of partners from various constituencies and consisting of experts in maternal, newborn and child health, participated in a review meeting in June 2013, follow up calls and emails, and provided inputs into the development and finalization of the document. A range of constituencies shared the document throughout their networks and consulted for inputs into the final document, including governments, donors and foundations, multilateral organisations, academic institutions, health care professional associations including gynaecological and obstetrics, and midwifery associations, the private sector, and civil society. The contributions of partners and invited experts are gratefully acknowledged.

We would like to thank the following individuals for their contribution:

Technical Working Group: Sharon Arscott-Mills, Bernadette Daelmans, Andres de Francisco Serpa, Rachael Hinton, Shyama Kuruvilla, Blerta Maliqi, John Murray, Giorgio Tamburlini.

Advisory Group Members: Taghreed Adam, Lara Brearley, Rafael Cortez, Kim Dickson, Claire Glenton, Metin Gulmezoglu, David Hagan, Jill Keesbury, Karusa Kiragu, Joy Lawn, Lori McDougall, Victor Mukonka, Jesca Nsungwa-Sabiliti, Lucinda O'Hanlon, Jennifer Requejo, Priyanka Saksena, Joanna Schellenberg, Gerard Schmets, Tim Shorten, Anand Sivasankara Kurup, Kate Somers, Marleen Temmerman, Steven Uggowitz, John Worley.

WHO Colleagues: Valentina Baltag, Marie-Noel Bruné, Flavia Bustreo, Carmen Casanovas, Thomas Cherian, Carmen Dolea, Carlos Dora, Joan Dzenowagis, Jane Ferguson, Mario Festin, Lisa Hedman, Sowmya Kadandale, Elizabeth Mason, Matthews Mathai, Gerlin Naidoo, Chizuru Nishida, Mikael Ostergren, Annie Portela, Nigel Rollins, Marcus Stahlhofer, Nicole Valentine, Adriana Velazquez Berumen, Eugenio Villar Montesinos.

PMNCH Colleagues: Henrik Axelson, Vaibhav Gupta, Carole Presern.

Also thanks to the project interns: Alexander De Ville, Elizabeth Noble.

Femmes du Mali, engageons-nous
pour des élections apaisées,
source de cohésion sociale.

LE MONDE SE CONSTRUIT
AVEC LES FEMMES

Maliens du Nord,
Maliens du Sud

Nous sommes unis pour
un Mali indivisible et digne !

Femmes Maliennez notre bien commun est le Mali,
préservons-le de toutes violences.
