

ABOUT GLEWS

The **Global Early Warning System (GLEWS)** is a joint system that builds on the added value of combining and coordinating the alert and disease intelligence mechanisms of OIE, FAO and WHO for the international community and stakeholders to assist in prediction, prevention and control of animal disease threats, including zoonoses, through sharing of information, epidemiological analysis and joint risk assessment... Countries pledge to wipe out sheep and goat plague globally

APRIL 2, 2015

Worldwide campaign aims for complete eradication of Peste de Petits Ruminants by 2030

High-level authorities from 15 countries on Thursday pledged to collaborate on a global plan to wipe out forever the devastating animal disease known as 'Peste des petits ruminants' by 2030, a lethal plague for goats and sheep and the scourge of rural households in vast swathes of the developing world...
