## Sexually transmitted infection treatment challenges

This series highlights current challenges to the management of *Neisseria gonorrhoeae*, *Chlamydia trachomatis*, *Mycoplasma genitalium*, non-gonococcal urethritis, bacterial vaginosis, syphilis and *Trichomonas vaginalis*. We have assembled a collection of state-of-the-art reviews that capture the latest evidence and opinions on where future treatment efforts should be placed.

This series was commissioned by Sepehr Tabrizi and Marcus Chen in preparation for the World STI & HIV Congress 13–16 September 2015 organised by the International Society for STD Research (ISSTDR).

Collection published: 30 July 2015

Last updated: 19 August 2015
