Performance Management for Health Logistics Workers

A Toolkit for Managers

This tool focuses on performance management as an essential element of successful supply chain and logistics systems. It is designed to assist health supply chain workers who have performance management responsibilities.

» More information about [performance management and supply chain management](#).

How Should You Use This Tool?

You can use this tool as an overall guide for developing and instituting a performance management system or you can consult individual sections for guidance in specific areas.

This toolkit provides you with an overview of each of the four steps of the performance cycle, as well as links to [job aids](#), [sample templates](#), and other [performance management-related resources](#).

The Performance Cycle

Click on each step in the cycle to learn about that aspect of performance management.

The performance cycle is central to performance management. As an ongoing cycle, it requires that you and your staff have performance-related conversations throughout the year, not just at an annual meeting to rate the worker's performance.
