

Progress of selected Community Health Centres in achieving Basic Emergency Obstetric & Neonatal Care (BEmONC) status, December 2014

The Facility Improvement Team (FIT) assessments score selected health facilities, including Community Health Centres (CHCs), on their readiness to provide quality EmONC based on whether they meet certain criteria (see below) for each of seven enablers ranging from water and sanitation to essential drugs. The criteria for a CHC is different to a hospital. This is because of variations in their capacity to perform certain procedures. Each facility is scored using the same traffic light colour system for each enabler as described on the score card for BEmONCs.

Each facility is given an overall score. The image to the left shows the progress for all hospitals since the FIT assessments started. The rating is based on the total scores of all enablers of the hospitals and expressed as a percentage.

See below for more details of how each hospital performed for each enabler using the traffic light rating and how each hospital ranked among all the hospitals assessed under the FIT.

For more details, contact Dr. Santigie Sesay, Director, Reproductive & Child Health, MoHS Sierra Leone; sanniesay@gmail.com

Performance rating	Score	Facility has:
	Green 4	Met all criteria
	Yellow 3	Mostly met criteria
	Orange 2	Partially met criteria
	Red 1	Not met criteria
