

# ETHIOPIA

## 2016 Demographic and Health Survey

### Fertility and Family Planning

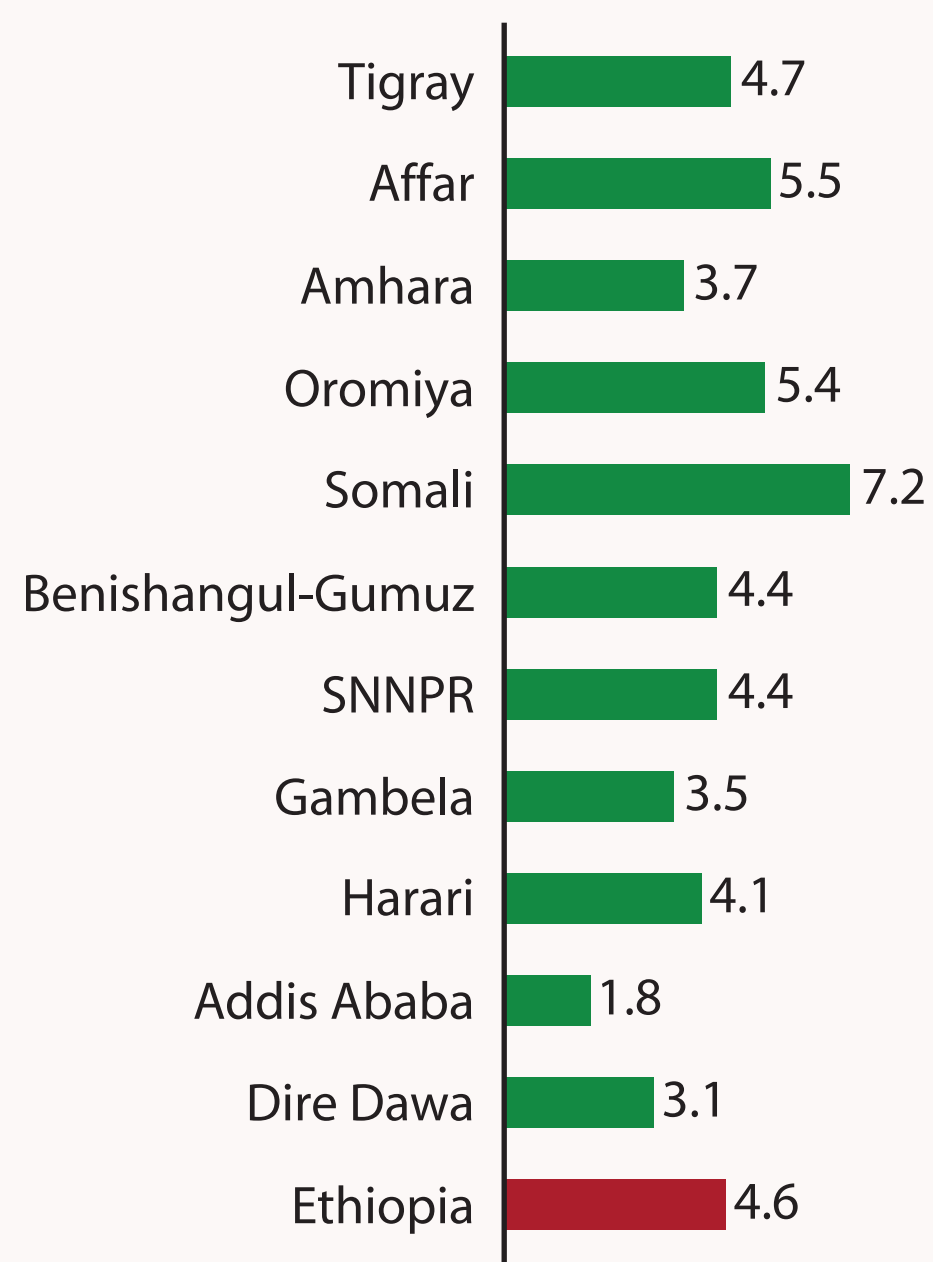

Women in Ethiopia have an average of 4.6 children. Fertility has declined from 5.5 children per women in 2000.

**Trends in Total Fertility Rate**  
Births per woman for the three-year period before the survey

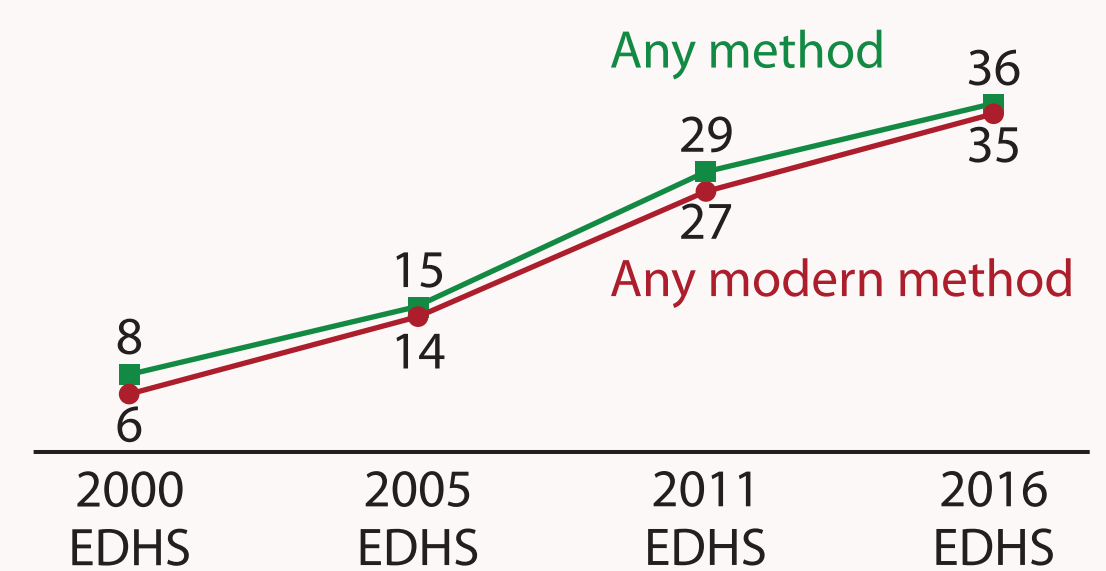

Regionally, fertility ranges from 1.8 children per woman in Addis Ababa to 7.2 children per woman in Somali.

**Total Fertility Rate by Region**  
Births per woman for the three-year period before the survey

Use of modern family planning methods among married women has improved fivefold from 6% in 2000 to 35% in 2016.

**Trends in Family Planning Use**  
Percent of married women age 15-49 using family planning

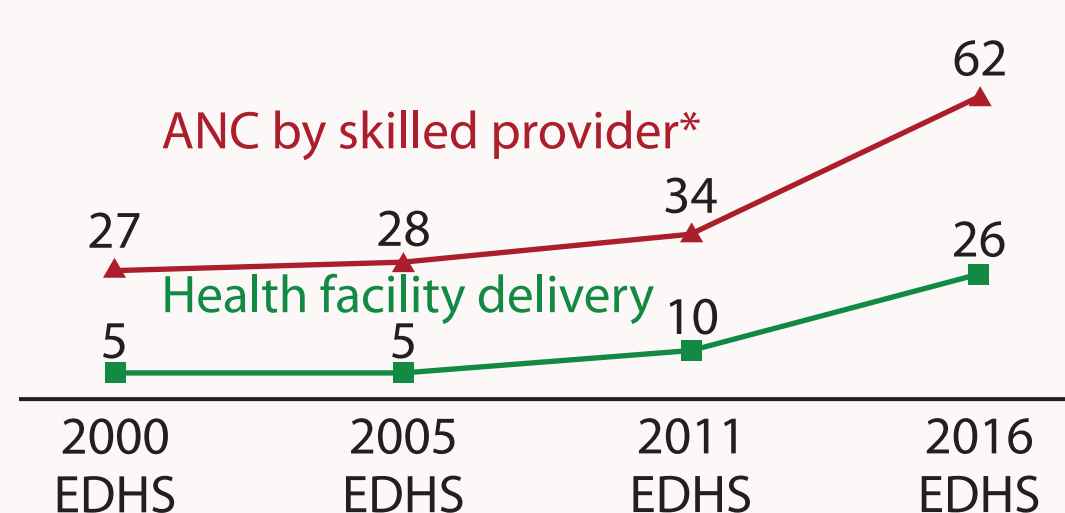

### Maternal and Child Health

More Ethiopian women are receiving antenatal care (ANC) from a skilled provider since 2000. Health facility deliveries have more than doubled from 10% in 2011 to 26% in 2016.

**Trends in Maternal Health Care**

Percent of live births in the five years before the survey

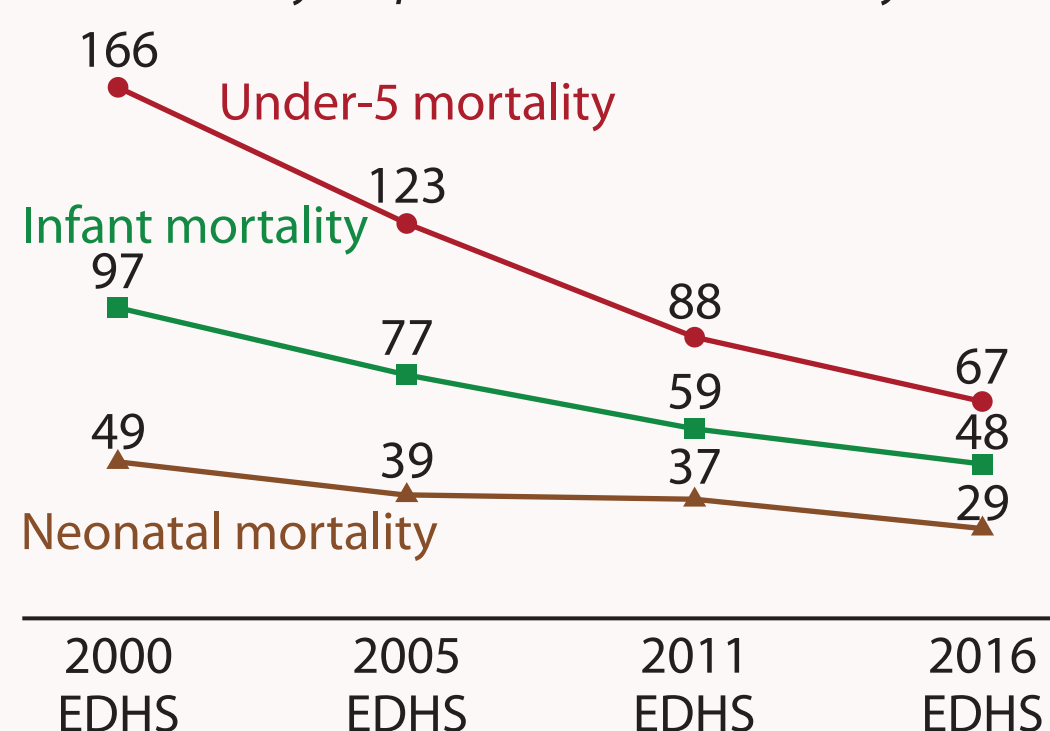

\*% of women for most recent live birth

Childhood mortality rates have declined since 2000. 1 in 15 Ethiopian children does not survive to their 5th birthday.

**Trends in Childhood Mortality**

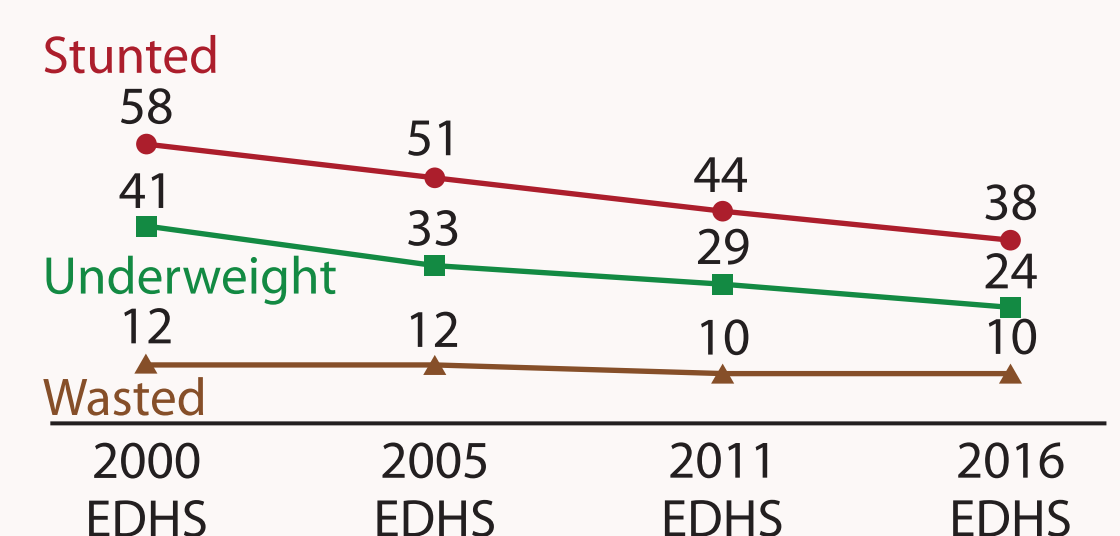

Deaths per 1,000 live births for the five-year period before the survey

Children's nutritional status has improved since 2000. Currently, 38% of children under 5 are stunted, 24% are underweight, and 10% are wasted.

**Trends in Childhood's Nutritional Status**

Percent of children under five, based on 2006 WHO Child Growth Standards
