I would like to receive email from KIX: Karolinska Institutet and learn about other offerings related to An Introduction to Global Health.

### About this course

Global Health is a new field within public health sciences that integrates the knowledge from fields such as epidemiology, medicine, economy and the behavioral sciences. The main aim of the course, An Introduction to Global Health, is to describe and analyze variation in health between and within countries. This will provide an understanding of causes of the variation. The course will include measurements and determinants of health. Further, the course offers a public health perspective of the global burden of diseases. The course will specifically address: Maternal and Child Health; Sexual reproductive health and rights; Major infectious disease - malaria, TB, HIV, pneumonia; Non communicable disease; Mental health; Disasters; Injuries; Health systems and financing; and Health policy. Analysis will be done from a gender and equity perspective.
