## Past, present, and future of global health financing: a review of development assistance, government, out-of-pocket, and other private spending on health for 195 countries, 1995-2050

Research Article

We estimated domestic health spending for 195 countries and territories from 1995 to 2016, split into three categories - government, out-of-pocket, and prepaid private health spending - and estimated development assistance for health (DAH) from 1990 to 2018. We estimated future scenarios of health spending using an ensemble of linear mixed-effects models with time series specifications to project domestic health spending from 2017 through 2050 and DAH from 2019 through 2050.

## Potential for additional government spending on HIV/AIDS in 137 low-income and middle-income countries: an economic modelling study

Research Article

Between 2012 and 2016, development assistance for HIV/AIDS decreased by 20.0%; domestic financing is therefore critical to sustaining the response to HIV/AIDS. To understand whether domestic resources could fill the financing gaps created by declines in development assistance, we aimed to track spending on HIV/AIDS and estimated the potential for governments to devote additional domestic funds to HIV/AIDS.

## Tracking spending on malaria by source in 106 countries, 2000-16: an economic modelling study

Research Article

Sustaining achievements in malaria control and making progress toward malaria elimination requires coordinated funding. We estimated domestic malaria spending by source in 106 countries that were malaria endemic in 2000-2016 or became malaria-free after 2000.
