The Stephen B. Thacker CDC Library is collecting COVID-19 (2019 Novel Coronavirus) research articles and compiling them into an easily accessible and downloadable database to help researchers find the latest COVID-19 research.

This database is updated by systematically searching various bibliographic databases and hand searching selected grey literature sources. The methodology is posted below. Updates are posted every day, Monday through Friday.

In addition to this database, there are two other downloadable databases of COVID-19 articles. The [World Health Organization's COVID-19 research article database](#) is a database of research articles compiled daily by WHO. [LitCovid](#) is a database compiled by the National Library of Medicine from COVID-19 articles in PubMed. Both databases' articles are included in the collection below.

While our methods aim to be as comprehensive, exhaustive, and systematic as possible, due to this situation rapidly changing this database may not contain all research published so far. Please check the methodology and the date when this database was last updated to understand what is included.
