

WHAT IS COVID-19

- Corona viruses (CoV) comprises of a large family of viruses (7 strains) that are common in human beings as well as animals
- These cause illnesses ranging from common cold to more severe diseases such as:
 - Severe Acute Respiratory Syndrome (SARS-CoV)
 - Middle East Respiratory Syndrome (MERS-CoV).
- Novel coronavirus (2019-nCoV): a new strain not identified in humans earlier
- Corona viruses are zoonotic, i.e. transmitted between animals and human beings
 - SARS-CoV: Civet cats to humans
 - MERS-CoV: dromedary Camels to humans
 - Several other Corona viruses circulating in animals- not yet infected humans
