## Summary – 6 February

In many countries, the more transmissible SARS-CoV-2 variants are currently replacing previously dominating lineages. In the UK, the B.1.1.7 variant from England (B117), South Africa (B1351) and Amazon (B.1.1.7) are causing new infections in Ireland, Portugal and Israel (B117) and spreading through most countries in continental Europe and

CoV-2 variants B117, B1351 and P1 are  
. B117, B1351 and P1 are already dominant in  
ia (P1). They also account for 50% or more of  
7). Over the coming weeks, B117 will spread  
the US.
