

4. Track the **change over time** of the selected outcome  split by chosen data group 

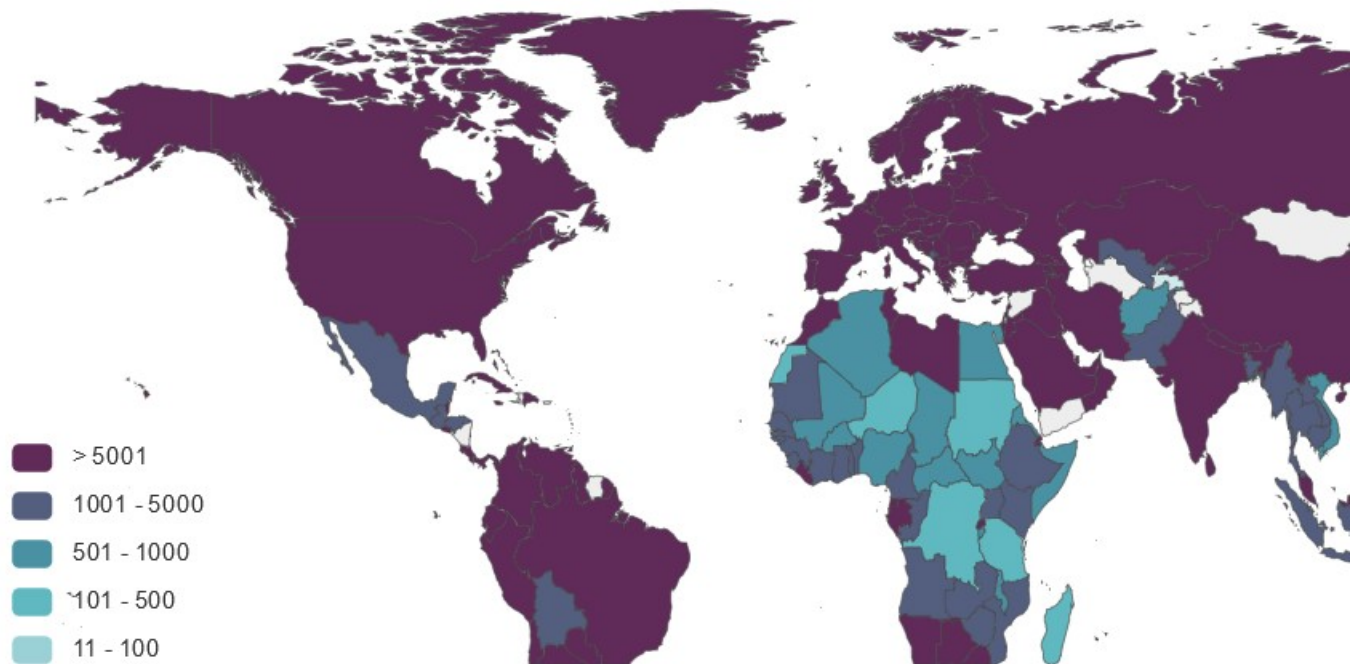

## WORLD VIEW <sup>2</sup>

The map displays data as reported by countries on a daily basis according to these definitions:

**Tests , Cases , Deaths , Positivity rate **

If the **Cumulative ** option is chosen, data up to and including the date selected will be displayed. If **Daily ** is selected, the average value from the previous 7 days is applied (7-day rolling average).

To put the number of tests, cases or deaths in the context of the population size, switch between **Total ** and **Per 100,000 **. Hovering over the map produces a pop up window with country-specific data.
