Service delivery and safety

WHO Global Learning Laboratory for Quality UHC

Overview

The WHO Global Learning Laboratory (GLL) for Quality UHC links the experiences, expertise, and wisdom of people across the world on important issues relating to quality in the context of UHC. The GLL is a safe space to share knowledge, experiences and ideas; to challenge ideas and approaches; and to spark new thinking for quality UHC.

Share

Enables members to share experiences, knowledge and ideas from the country level in order to disseminate lessons learned across the world.

Challenge

Members challenge each other, focus on in-depth analysis and refine ideas, programmes or projects focused on action.

Spark

Members generate innovative ideas to support a collaborative task, activity or programme to be further developed in-country.

Learning for quality health services

Learning is at the heart of improving health care quality and making health outcomes better. The GLL aims to understand the stories behind improving health care quality, paying close attention to the interventions and actions undertaken to achieve desired health service improvement.

The WHO GLL for Quality UHC uses various mechanisms to encourage learning for improved quality health services. These mechanisms include virtual as well as in-person moments to facilitate sharing, documentation and spread of frontline experiences on quality.
