

# Global Research on AntiMicrobial resistance (GRAM) Project

## About GRAM

The purpose of the Global Research on AntiMicrobial resistance (GRAM) Project is to **generate accurate and timely estimates of the magnitude and trends in antimicrobial resistance (AMR) burden across the world**, which can be used to inform treatment guidelines and agendas for decision-making and research, detect emerging problems and monitor trends to inform global strategies, as well as facilitate the assessment of interventions over time.

GRAM is the flagship project of the University of Oxford Big Data Institute-IHME Strategic Partnership. GRAM was launched with support from the United Kingdom Department of Health's Fleming Fund, the Wellcome Trust, and the Bill & Melinda Gates Foundation.
