

Dynamic Dashboard

The Global AMR R&D Hub's Dynamic Dashboard continuously collects and presents information on AMR R&D investments, products in the pipeline and push and pull incentives across three galleries. It will provide the evidence base to help set priorities and maximize the impact and efficiency of resources and efforts invested into AMR R&D.

Investments in AMR R&D

The global knowledge center for all AMR R&D activities and investments across the One Health continuum.

Antibacterials in clinical development

Pipeline of products in clinical development and products that were recently approved.

Incentives for Antibacterial R&D

What are we doing to fix the challenges hindering the development of, and access to, priority antibacterials for human health.

The Investment Gallery of the Dynamic Dashboard currently presents information on AMR-relevant R&D across the One Health spectrum (human, animal, plant and environmental health), including bacterial, fungal and other pathogens. The Pipeline Gallery brings together information about antibacterial products for human use in clinical development from the World Health Organization and The Pew Charitable Trusts analyses. The Incentives Gallery displays currently implemented incentives targeting therapeutic markets for human antibacterials.
