The UNHLM Political Declaration on TB (<https://www.stoptb.org/webadmin/cms/docs/Political-Declaration-on-the-Fight-against-Tuberculosis.pdf>) contained a number of global targets endorsed by Heads of States, including targets to treat 40 million people with TB between 2018 and 2022, 3.5 million children with TB, 1.5 million people with drug-resistant TB and at-least 30 million put on TB Preventive Treatment.

In order to make these global targets relevant at country level and with a view to drive country level political commitment, facilitate monitoring and accountability, the Stop TB Partnership has produced country breakdowns for these targets using the latest WHO data on incidence estimates and country notifications to WHO. All projections were done using the TIME model implemented by Avenir Health. For the top high burden countries, wherever possible a check was done with the country National Strategic Plan and the Global Fund performance framework targets.
