

# Welcome to the CARE Climate and Resilience Academy

Whether you work for CARE, or with one of our partners, or for any other organisation involved with climate change and resilience, the aim of this platform is to expand and deepen your knowledge and understanding of climate change, and its causes and consequences.

Our resources build on existing knowledge and experience, and offer new skills and tools that enable participants to better tackle the complexity of the problem.

Learning resources are directly based on CARE's 20 years of experience in resilience, community-based adaptation, climate advocacy, and in our own efforts to become a climate-smart organization.
