The goal of the One Health Research, Education and Outreach Centre in Africa (OHRECA) is to improve the health of humans, animals and ecosystems through capacity building, strengthening of local, regional and global networks and provision of evidence-based policy advice on One Health in sub-Saharan Africa. The centre has four thematic areas: control of neglected tropical zoonotic diseases; emerging infectious diseases; food safety and informal markets; and prevention and control of antimicrobial resistance.

- Research as the basis for science and academia, policy advice, recommendations for interventions including donor investments.
- Development of strategies and action plans to control zoonotic diseases and antimicrobial resistance
- Support of public campaigns to control and/or eradicate zoonotic and foodborne diseases and promote rational use of drugs.
