

Noncommunicable Diseases Data Portal

Noncommunicable diseases (NCDs) – chief among them, cardiovascular diseases (heart disease and stroke), cancer, diabetes and chronic respiratory diseases – cause nearly three-quarters of deaths in the world. Their drivers are social, environmental, commercial and genetic, and their presence is global. Every year 17 million people under the age of 70 die of NCDs, and 86% of them live in low- and middle-income countries.

Users can explore the data below by country, accessing detailed information on noncommunicable diseases and their key risk factors:

Noncommunicable Diseases & Key Risk Factors

- 🔗 Cancer
- 🍷 Harmful alcohol use
- ❤️ Cardiovascular diseases (CVDs)
