## POLICY STATEMENT

### TO PROMOTE THE USE OF THE LIBYAN ESSENTIAL MEDICINES LIST (LEML)

ISSUED BY THE

**Honorable of Health, Ministry of Health, Libya**

November 2018.

This year has seen the development of Libya's first EML through the collaboration between our Pharmacy Administration, and WHO under the EU-funded SHAMS project. The importance of the LEML in the health care delivery system of Libya cannot be over emphasized. It will in no doubt streamline the drugs deployed in the healthcare delivery system of the country. This will ultimately enhance the quality of health care services. It will also provide a reference standard for all levels of healthcare towards ensuring good drug supply management.

This List is a key tool that will effectively promote access to essential medicines by majority of the Libyan population, through their correct selection, management and use to achieve maximum therapeutic benefit and improve patient outcomes. The LEML is an investment guide - a guide for the investment of healthcare funds in financing the most appropriate medicines to achieve therapeutic aims in response to prioritized public health need. It will therefore reduce healthcare cost.

Therefore, as a matter of policy directive, henceforth, **all medicines to be procured by the public health facilities in Libya should be drawn from the LEML.** From now onwards, the LEML becomes an essential companion for all disciplines of healthcare workers, general practitioners, specialists and healthcare management personnel as well as students and interns. Pharmaceutical donations must also comply with the List. The List will be reviewed and updated every two years by our panel of experts, in line with WHO recommendations and new evidence and technological advancements on efficacy and safety, as well as common diseases in Libya.

I hereby enjoin all our health care providers to get a copy of this first edition of the LEML and ensure its use for the provision of affordable quality healthcare to our people.

## Forward

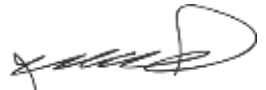

It gives me great pleasure to write the forward of this first edition of the Libya Essential Medicines List (LEML). Let us take a moment down the history lane of the Pharmaceutical List in Libya so we can all understand how we arrived where we are today.

In the past, the National Pharmaceutical and Medical Equipment Company (NPMEC) was responsible for medicines selection for public procurement as well as distribution to public healthcare facilities in Libya in accordance with Act number 69 of 1972, for regulating the drug trade. The Libyan national standard list of medicines, commonly known as the Libyan Pharmaceutical List (LPL), was the list of all registered medicines used in the Libyan health care system, and was originally formulated by the Ministry of Health. However, it was soon realized that the LPL was too extensive to use for the general procurement of medicines, government subsidy, and also encompassed several unsafe and superseded medicines. It was therefore implicated by local researchers and the WHO as a contributor to the problem of medicines management and supply in Libya. The National Committee of Drugs (NCD) was therefore formulated in 2003 to review the LPL. In 2006, based on the recommendations of the NCD, the LPL was cancelled and replaced by the Libyan Pharmaceutical List of Essential Medicines (LPLEM). However, based on the release of the 20<sup>th</sup> edition of WHO Model List of Essential Medicines (March 2017), we deemed it necessary and timely to release yet another edition of the LPLEM, code-named the Libyan Essential Medicines List (LEML).

The importance of an essential medicines list in the health care delivery system of a nation like Libya cannot be over emphasized. It will in no doubt streamline the drugs deployed in the healthcare delivery system and will ultimately enhance the quality of health care services. It will also provide a reference standard for all levels of healthcare towards ensuring good drug supply management.

Therefore, at this juncture, let me state emphatically and as a matter of policy directive, that henceforth, all drugs to be procured by the public health facilities in Libya should be drawn from this LEML. The LEML from now onwards, becomes an essential companion for all disciplines of healthcare workers, general practitioners, specialists and healthcare management personnel as well as students and interns. I hereby enjoin all our health care providers to get a copy of this first edition of the LEML and ensure its use for the provision of affordable quality healthcare to our teeming populace.

On behalf of the Ministry of Health, I wish to acknowledge with sincere thanks and gratitude, the technical and financial support of the World Health Organization (WHO) and the European Union (EU), the LEML committee members, other technical experts, contributors and reviewers who have supported the Pharmacy Administration to make this first edition of the LEML a reality.

**Dr. Omar Bashir Al-Taher**  
Minister of Health, Libya

## Preface

According to the World Health Organization (WHO), up to 50% of populations in low-income countries do not have reliable access to quality essential medicines. Medicines are either unavailable in public health facilities or unaffordable to the population that needs them most. Globally, this lack of access kills millions who die from diseases which are preventable and/or treatable. For this reason, access to essential medicines is now considered a universal human right.

Appropriate selection of essential medicines has been considered by the WHO as the most cost-effective health intervention after childhood immunization. The appropriate selection of medicines can assist with the management and supply of medicines and, as a result, curb the financial burden caused by pharmaceuticals on national health budgets.

The objectives of WHO essential medicines and pharmaceutical policy programme are to save lives, and improve health by ensuring the quality, efficacy, safety and rational use of medicines, including traditional medicines. It promotes equitable and sustainable access to essential medicines particularly for the poor and disadvantaged. Careful selection of medicines linked with clinical treatment guidelines can contribute to better health care.

The development of the LEML by the Pharmacy Administration couldn't have come at a better time than now, as the country goes through the recovery phase of a humanitarian emergency, and the need to reform the health system has become more urgent than ever before.

Am particularly delighted that the LEML has been developed within the national context and taking cognizance of the most common diseases and conditions in Libya, and based on the 20th edition of the WHO Model List of Essential Medicines (March 2017). The LEML is therefore in line with the global list and represents the minimum number of medicines that should be available within any fully functioning health care system.

The LEML should be a key component of the Libyan Essential Package for Health (LEPH), which ultimately defines the comprehensive priority services and interventions for Universal Health Coverage (UHC). The regular and consistent use of the LEML will promote access to essential medicines to achieve maximum therapeutic benefit to optimize patient outcomes, and therefore improve healthcare delivery, and contribute to the attainment of the Constitutional right to health of the Libyan population.

Let me express my profound gratitude to the Honorable Minister of Health for his exemplary leadership, and the Director of Pharmacy Administration for the commitment of her team in the development of the LEML. I therefore strongly encourage all relevant health professionals to make the best use of this LEML in their daily work, provide feedback on its use and evidence-based suggestions towards its future revision.

## Acknowledgment

The continuing problem of medicines management and supply in Libya has been acknowledged by the Libyan Government in several press releases. It is in an effort to address these problems that the Libya Essential Medicines List (LEML) has been developed.

The LEML is the fruit of the joint efforts of the staff of the Ministry of Health, the Pharmacy Administration, the National Centre for Disease Control (NCDC), and other experts in data interpretation and evaluation of the safety of medicines.

The Pharmacy Administration of Libya would like to extend her sincere appreciation to the World Health Organization (WHO) for their quality technical assistance, and timely financial provisions for the several consultative workshops and printing of this Libya Essential Medicine List (LEML).

We are highly indebted to our funding partner, the European Union (EU), who provided the funds for the development and production of this document. The other numerous financial support of the EU through WHO for capacity building on SIAMED and Pharmacovigilance are also much appreciated.

My special thanks go to the LEML technical committee members and all participants at the various consultative workshops for their invaluable technical contributions in scrutinizing and finalizing the list.

I cannot conclude without expressing my heartfelt and wealth of gratitude to the dedicated staff members of the Pharmacy Administration. As it is often said that the greatest resource of any organization is its workforce, they were the engine room for the development of this LEML.

I therefore implore all concerned stakeholders to utilize this useful guide for our medicines procurement to satisfy the critical medicine needs of the Libya masses. In this connection, the Pharmacy Administration will ensure that dissemination workshops are organized at the facility level to educate health care providers on the content and use of the List. The Ministry of Health will also put in place effective monitoring and evaluation mechanism to ensure its judicious use for the purpose for which it is meant.

Am also using this medium to call upon healthcare professionals and interested parties to continue their usual support in updating the list by forwarding comments and suggestions to the Pharmacy Administration of Libya.

I thank you all.

## Introduction

The pharmaceutical sector of any nation is responsible for providing society with quality medicines and other pharmaceutical services. According to the World Health Organization (WHO), Pharmaceuticals may constitute as much as 40% of the national health budget in developing countries, yet portions of the population may lack access to the most essential medicines; while the limited funds available for health are spent on unnecessary, ineffective and even dangerous medications.

The Pharmacy Administration with the support of international and national partners has therefore identified a subset of medicines that are safe, effective, and cost effective for the world's most common diseases and conditions. This subset of medicines represents the minimum number of medicines that are recommended to be available within any fully functioning healthcare system.

The importance of essential medicines list in a fully functional healthcare system cannot be over-emphasized. Some of the reasons for the use of EML include the following:

1. For equity and fairness, basic health services should be available to everyone. EML ensures regular supply of medicines most in need. It leads to improvement in public health and restores public confidence in the health care delivery system.
2. No public health sector or insurance system can afford to supply or reimburse all medicines that are available on the market. Essential medicines list thus guides the procurement and supply of medicines in the public sector; and guides what medicines the local manufacturers should produce.
3. Essential medicines represents a consensus by prescribers on pharmaceutical treatments of first choice, patients receive treatments of choice as well as the same or similar treatments from different prescribers, thereby improving the quality of health care.
4. It allows prescribers to be familiar with smaller number of medicines, thereby improving their knowledge of actual benefits and shortcomings of specific medicines therapy, easier dispensing, and better recognition and prevention of adverse drug reactions.
5. Lack of funds is not the reason for essential medicines list. Rather, EML it promotes quality of care and reduces cost as a result of improved effectiveness and efficiency in patients' treatment. This is the reason many international organizations such as WHO and UNICEF have adopted the EM concept for their procurement systems.
6. There is reduction in the number of different products to be stocked, distributed and monitored.
7. With increasing product competition, more favorable prices can be negotiated because larger quantities of the selected product will be needed thereby achieving economies of scale.
8. Ensuring quality of fewer numbers of medicines is also easier because quality can easily be monitored and assured. This is why pharmaceutical donations are also based on the national essential medicines list.
9. Selection of a limited number of pharmaceutical products facilitates provision and availability of drug information and training materials. This enhances focused patients' education efforts and promotion of adherence to treatment and proper use of medicines.

It is in view of the above benefits that the following list has been developed to improve supply of medicines, more rational prescribing, and a cost-effective national strategy.
