

## Our mission, vision and scope

Pulmonary rehabilitation in Crete

Our **mission** is to work locally in primary care and collaborate globally to improve respiratory health.

Our **vision** is of a global population breathing and feeling well through universal access to right care.

Our **scope** is research and education on improved primary prevention, recognition, diagnosis, treatment and palliation of non-communicable respiratory diseases, such as asthma and COPD, and respiratory infection in

community and primary care settings. This includes symptoms such as cough, wheeze, and breathlessness; treating tobacco dependence and encouraging physical activity.
